Canterbury CPT case histories: dates change what the database can identify

A provenance-aware check of discrimination, depth-limited change and elapsed-time claims

01 Date provenance

5,667 dates decoded

of 5,668 soundings · 2010–2017

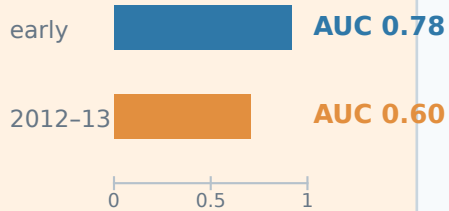

Programme, coverage and label resolution move with the date.

Dates matter

measurement context

02 AUC shifts with date

2010 Darfield manifestation

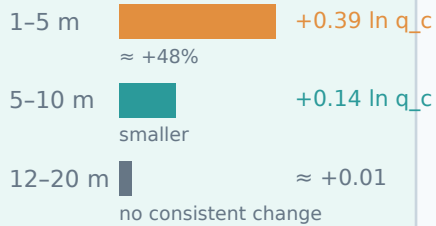

The gap persists with footprint and 500-m-cell controls.

AUC shifts

before the ground is invoked

03 Depth-limited change

Matched locations, 2012–14 vs P0

Crust and friction ratio: no consistent change.

Controls localise

to shallow saturated sand

04 Elapsed time is not identified

Within event-free windows

no positive time trend after property-scale location control

Repeat soundings change across earthquake-spanning intervals.

Interpretation boundary

sequence change vs ageing remains unresolved

Takeaway Record test dates and evaluate liquefaction case histories by provenance, location and depth.
